Kaldeera Forms®

Powerful SharePoint Forms in minutes!

REDUCES DEPLOYMENT TIME

"With the new Kaldeera Forms 2010, you can achieve the results you expect, without any additional development cost. Its technology, based on the application of rules, reduced our deployment time by 40%", **David Martin, Siemens CTO**.

TOP FEATURES

❖ **Dynamic Forms Fields.** Kaldeera Forms allows individual fields to be either hidden or disabled depending on user, group, or rules applied to the field. This can reduce the overall number of forms required for a solution

❖ **Default values** for field types such as "Person" or Lookup fields.

❖ **Superior Form Layout.** Easily create better readable forms by grouping up form fields in different tabs or sections.

❖ **One-step Forms Deployment.** Utilize your test environment for new forms and simply export the final forms to your production environment.

Advanced Forms®
Enhancing SharePoint® Forms.

Works with Windows Server® 2008 R2

- **Create the forms your users will love**: Well-designed forms can be easily built using Kaldeera Forms.

- **Create powerful forms-based applications:** The ease of use of Kaldeera Forms lets you build even the most powerful form in minutes.

- **Reduce development cost**: Kaldeera Forms is a "No code" solution, requiring no programming.

- **Safe investment**: Kaldeera Forms provides a vastly improved user experience. All data is still stored and available as if it had been entered using the SharePoint standard forms.

Forms are at the heart of every data-centric solution. Developing forms often is laborsome, and what's worse, inefficient forms result in reduced productivity and become a nuisance to employees. Frequently, solutions fail to achieve user adoption because of inefficient forms.

The Kaldeera Forms product not only simplifies the creation of forms but also enables the form designer to build highly-functional and well-designed forms.

Kaldeera Forms is a "no code" solution, which means that forms can be created by anyone who understands the process. No longer does this work require programmers, therefore the time to implement and deploy a forms-based solution is greatly reduced.

Kaldeera has invented a clever way of making forms highly functional and adaptable: Dynamic Form Fields are driven by user-defined rules and only present the relevant fields of a form to a given user. This often reduces the number of forms and custom code being required.

Kaldeera Forms leverages Silverlight to make the form design process as efficient as possible, and a wide range of customization options exist.

How does Kaldeera Forms compare?

FEATURE	SHAREPOINT 2007	SHAREPOINT 2010	KALDEERA FORMS 2010
Fully Integrated into SharePoint	✔	✔	✔
List and Content type forms definitions	✔	✔	✔
